DOCUMENT VERIFICATION API'S SPECIFICATION

REPRESENTED BY:

DEPARTMENT OF INFORMATION TECHNOLOGY & COMMUNICATION, JAIPUR

Document Verification API's Specification

Table of Contents:

1. Introduction:

The Department of Information Technology & Communication, Rajasthan has been created, with the mandate of providing the all type of document verification to the residents. The DoIT&C (Rajasthan) provides online authentication to verify the documents of the document holder.

"Authentication" means the process wherein document type id, document number along with all attributes are submitted for verification on the basis of information, or data or documents available with it. DoIT&C provides an online service to support this process.

2. Purpose of the Document:

According to DoIT&C, this document briefly described the API services that can be accessed through Raj Sevadwar to verify the documents from the departments.

3. Understanding of All Document Verification Wrapper API's Services:

3.1. Token Generate Authentication:

Private URL: http://103.203.136.80/DocumentVerificationEngineWebAPI/token?

Request Parameters:
UserName : Enter your SSO ID
Password   : WRAPPERAPIUSER
Grant_Type: password

Response json:

Successful Response:

```
{
        "access_token": "q2W6Gc6qSw5NY2WKOQ-
        8seWnEetShLzkMIW1X1zyveXhts8tUHQdNR_tElP57Ollwi37BRqXtatewxxIF0HyeBMq
        Wvdwwe2dSyarhXLz5ejqHLG3JH8pWZfiXWwT9Bi5xfL6v097KFbO5bXH0myxW7H29Fl
        Z2S4qsuRTfLemvDNipdlLV2ATcRFiViqllUt1tTQJ0jqVT-
        pJ6RjeFGX3YQd_Da_Vnd8Aqm8Jt73UZ4k-
        YtDODEqTgGtPpNa22IxT6fwuvHuyRIwU4aMAUNZkeG_J31nyFGZCQTXLq3wUbb_EhA
        ktJ-d-KnHR2MS_fAFxZlwHpcFt20bs899gDiku09Ty3tXauvv-OIDWzwW7Fq8",
        "token_type": "bearer",
        "expires_in": 345599
}
```

Failure Response:

```
{
  "error": "invalid_grant",
  "error_description": "Invalid Username or password"
}
```

Document Verification API's Specification

Description:

Request Parameters:

Parameter Name	Data Type	Description
User Name	String	This parameter indicates the User Name and It will be a string type
Password	String	This parameter indicates the Password and It will be a string type
Grant_Type	String	This parameter indicates the grant type and it will be a static password. It will be a string type

Successfully Response:

Parameter Name	Data Type	Description
access_token	String	This parameter is used for authenticate and it will be a string type
token_type	String	It indicates the type of token
expires_in	String	It shows the expires of the token

Failure Response:

Parameter Name	Data Type	Description
error	String	This parameter indicates the error and it will be a string type
error_description	String	This parameter indicates the error description and it will be a string type

3.2. Dashboard Data:

Private URL:
http://103.203.136.80/DocumentVerificationEngineWebAPI/MobileApi/GetDashBoardData

Request Parameters:

SSOID: Enter your SSOID
Year: Enter the year
UserType: Enter the user type

Response json:

Successful Response:
```
{
    "Message": "Data Retrived",
    "IsSuccess": true,
    "TotalRecordsCount": 0,
    "DocumentName": null,
    "Data": {
        "DocumentCountList": [],
        "TotalVerificationCount": 317,
        "TotalPendingVerificationCount": 38,
        "TotalApprovedVerificationCount": 189,
        "TotalRejectedVerificationCount": 0
    }
}
```
Failure Response:
```
{
    "Message": "Exception Occurred",
    "IsSuccess": false,
    "TotalRecordsCount": 0,
    "DocumentName": null,
    "Data": null
}
```

Description:

Request Parameters:

Parameter Name	Data Type	Description
SSOID	String	This parameter indicates the SSOID and It will be a string type
Year	int	This parameter indicates the Year and it will be a int type

UserType	String	This parameter indicates the User type and it will be a string type

Successfully Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the message of data retrieved and it will be a string type
IsSuccess	String	This parameter checks the data and if it is successful response than it will be true
TotalRecordsCount	String	This parameter indicates the total record count and it will be a string type
DocumentName	String	This parameter shows the document name and it will be a string type
Data	String	This parameter show all the API data and it will be a string type

Failure Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the error and it will be a string type
IsSuccess	String	This parameter indicates the error description and it will be a string type
TotalRecordsCount	String	This parameter indicates the total records count, if total records count will be wrong.
DocumentName	String	This parameter indicates the document name and it will be an string type.
Data	String	This parameter indicates the null data and it will be an string type.

3.3.   Get All Type Document:

Private URL:
http://103.203.136.80/DocumentVerificationEngineWebAPI/MobileApi/GetAllTypeDocument

Request Parameters:
SSOID : Enter your SSOID
Year: Enter the year
UserType: Enter the user type

Response Json:
Successfully Response:

  "Data": null
}
```

Description:

Request Parameters:

SSOID	String	This parameter indicates the SSOID and It will be a string type
Year	int	This parameter indicates the Year and It will be a int type
UserType	String	This Parameter indicates the user type and it will be a string type

Document Verification API's Specification

Successfully Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the message of data retrieved and it will be a string type
IsSuccess	String	This parameter checks the data and if it is successful response than it will be true
TotalRecordsCount	String	This parameter indicates the total record count and it will be a string type
DocumentName	String	This parameter shows the document name and it will be a string type
Data	String	This parameter show all the API data and it will be a string type

Failure Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the error and it will be a string type
IsSuccess	String	This parameter indicates the error description and it will be a string type
TotalRecordsCount	String	This parameter indicates the total records count, if total records count will be wrong.
DocumentName	String	This parameter indicates the document name and it will be an string type.
Data	String	This parameter indicates the null data and it will be an string type.

3.5. Get Pending Document:

Private URL:
http://103.203.136.80/DocumentVerificationEngineWebAPI/MobileApi/GetPendingDocument

Request Parameters:

SSOID : Enter your SSOID
Year: enter year
UserType: Enter user type

Response json:

}
```

Description:

Request Parameters:

SSOID	String	This parameter indicates the SSOID and It will be a string type
Year	int	This parameter indicates the Year and It will be a int type
UserType	String	This parameter shows the User type and it will be a string type

Successfully Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the message of data retrieved

Parameter Name	Data Type	Description
		and it will be a string type
IsSuccess	String	This parameter checks the data and if it is successful response than it will be true
TotalRecordsCount	String	This parameter indicates the total record count and it will be a string type
DocumentName	String	This parameter shows the document name and it will be a string type
Data	String	This parameter show all the API data and it will be a string type

Failure Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the error and it will be a string type
IsSuccess	String	This parameter indicates the error description and it will be a string type
TotalRecordsCount	String	This parameter indicates the total records count, if total records count will be wrong.
DocumentName	String	This parameter indicates the document name and it will be an string type.
Data	String	This parameter indicates the null data and it will be an string type.

Document Verification API's Specification

3.6.   Get Report:

Private URL:
http://103.203.136.80/DocumentVerificationEngineWebAPI/MobileApi/GetNodalDocumentRep
ort

Request Parameters:

DocumentTypeID : 7
Year: Enter the year
UserID: Enter the User ID
VendorID: Enter your Vendor ID

Response json:
Successful Response:

}
```

Description:

Request Parameters:

Parameter Name	Data Type	Description
DocumentTypeId	int	This parameter indicates the Document type id and it will be a int type
Year	int	This parameter indicates the Year and it will be a int type
UserID	int	This parameter indicates the User ID and it will be a int type
VendorID	int	This parameter indicates the Vendor id and it will be a int type

Document Verification API's Specification

Successfully Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the message of data retrieved and it will be a string type
IsSuccess	String	This parameter checks the data and if it is successful response than it will be true
TotalRecordsCount	String	This parameter indicates the total record count and it will be a string type
DocumentName	String	This parameter shows the document name and it will be a string type
Data	String	This parameter show all the API data and it will be a string

Failure Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the error and it will be a string type
IsSuccess	String	This parameter indicates the error description and it will be a string type
TotalRecordsCount	String	This parameter indicates the total records count, if total records count will be wrong.
DocumentName	**String**	This parameter indicates the document name and it will be an string type.
Data	String	This parameter indicates the null data and it will be an string type

3.7.   Get Rejected Document:

Private URL:
http://103.203.136.80/DocumentVerificationEngineWebAPI/MobileApi/GetRejectedDocument

Request Parameters:

SSOID: Enter your SSOID
Year : Enter year
UserType: Enter your user type

Response json:

Document Verification API's Specification

Description:

Request Parameters:

Parameter Name	Data Type	Description
CertificateNumber	String	This parameter indicates the Certificate Number and It will be a string type
DocumentTypeId	int	This parameter indicates the Document type id and it will be a int type
SSOID	String	This parameter indicates the SSOID and It will be a string type
ProjectCode	String	This parameter indicates the Project code and It will be a string type

Successfully Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the message of data retrieved and it will be a string type
IsSuccess	String	This parameter checks the data and if it is successful response than it will be true
TotalRecordsCount	String	This parameter indicates the total record count and it will be a string type
DocumentName	String	This parameter shows the document name and it will be a string type
Data	String	This parameter show all the API data and it will be a string

Failure Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the error and it will be a string type
IsSuccess	String	This parameter indicates the error description and it will be a string type

TotalRecordsCount	String	This parameter indicates the total records count, if total records count will be wrong.
DocumentName	String	This parameter indicates the document name and it will be an string type.
Data	String	This parameter indicates the null data and it will be an string type

3.8.   Get Document Type:

Private URL:
http://103.203.136.80/DocumentVerificationEngineWebAPI/MobileApi/GetDocumentType

Request Parameters:
UserID: Enter your user id

Response json:

Successful Response:

```
{
  "Message": "Data Retrived",
  "IsSuccess": true,
  "TotalRecordsCount": 0,
  "DocumentName": null,
  "Data": [
    {
      "DocumentType": "Marriage Certificate",
      "DocumentTypeID": "2",
      "PendingCount": 1,
      "DepartmentApprovedCount": 1
    },
    {
      "DocumentType": "Birth Certificate",
      "DocumentTypeID": "4",
      "PendingCount": 5,
      "DepartmentApprovedCount": 36
    }
  ]
}
```

Document Verification API's Specification

Failure Response:
```
{
    "Message": "Data Retrived",
    "IsSuccess": true,
    "TotalRecordsCount": 0,
    "DocumentName": null,
    "Data": []
}
```

Description:

Request Parameters:

Parameter Name	Data Type	Description
UserID	int	This parameter indicates the User Id and It will be a int type

Successfully Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the message of data retrieved and it will be a string type
IsSuccess	String	This parameter checks the data and if it is successful response than it will be true
TotalRecordsCount	String	This parameter indicates the total record count and it will be a string type
DocumentName	String	This parameter shows the document name and it will be a string type
Data	String	This parameter show all the API data and it will be a string

Failure Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the error and it will be a string type
IsSuccess	String	This parameter indicates the error description and it will be a string type

TotalRecordsCount	String	This parameter indicates the total records count, if total records count will be wrong.
DocumentName	String	This parameter indicates the document name and it will be an string type.
Data	String	This parameter indicates the null data and it will be an string type

3.9. Get User Profile:

Private URL:
http://103.203.136.80/DocumentVerificationEngineWebAPI/MobileApi/GetUserProfile

Request Parameters:
SSOID: Enter your SSOID
RoleID: Enter your role id

Response json:
Successful Response:

   "IsSuccess": false,
   "TotalRecordsCount": 0,
   "DocumentName": "Medical Dairy Certificate",
   "Data": null
}
```

Document Verification API's Specification

Description:

Request Parameters:

Parameter Name	Data Type	Description
SSOID	String	This parameter indicates the SSOID and It will be a string type
Password	String	This parameter indicates the Password and It will be a string type

Successfully Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the message of data retrieved and it will be a string type
IsSuccess	String	This parameter checks the data and if it is successful response than it will be true
TotalRecordsCount	String	This parameter indicates the total record count and it will be a string type
DocumentName	String	This parameter shows the document name and it will be a string type
Data	String	This parameter show all the API data and it will be a string

Failure Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the error and it will be a string type
IsSuccess	String	This parameter checks the data and if it is unsuccessful response than it will be false
TotalRecordsCount	String	This parameter indicates the total records count, if total records count will be wrong.
DocumentName	String	This parameter indicates the document name and it will be an string type.

3.12. Get Rule ID:

Private URL: http://103.203.136.80/DocumentVerificationEngineWebAPI/MobileApi/GetRuleID

Request Parameters:
Vendor ID: Enter your vendor ID
DocTypeId: DocTypeId

Response json:
Successful Response:
```
{
  "Message": "Data Retrived",
  "IsSuccess": true,
  "TotalRecordsCount": 0,
  "DocumentName": null,
  "Data": []
}
```
Failure Response:
```
{
  "Message": "Exception Occurred",
  "IsSuccess": false,
  "TotalRecordsCount": 0,
  "DocumentName": "BPL Certificate",
  "Data": null
}
```

Description:

Request Parameters:

Parameter Name	Data Type	Description
VendorID	String	This parameter indicates the vendor ID and It will be a string type
DocTypeId	int	This parameter indicates the Document type id and it will be a int type

Document Verification API's Specification

Successfully Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the message of data retrieved and it will be a string type
IsSuccess	String	This parameter checks the data and if it is successful response than it will be true
TotalRecordsCount	String	This parameter indicates the total record count and it will be a string type
DocumentName	String	This parameter shows the document name and it will be a string type
Data	String	This parameter indicates the null data and it will be an string type

Failure Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the error and it will be a string type
IsSuccess	String	This parameter checks the data and if it is unsuccessful response than it will be false
TotalRecordsCount	String	This parameter indicates the total records count, if total records count will be wrong.
DocumentName	String	This parameter indicates the document name and it will be an string type.
Data	String	This parameter indicates the null data and it will be an string type

3.13. Get document type rules:

Private URL:
http://103.203.136.80/DocumentVerificationEngineWebAPI/MobileApi/GetDocumentTypeRules

Request Parameters:

User ID :Enter your user id
DocumentTypeID : doctypeid

Response json:
Successful Response:
```
{
   "Message": "Data Retrived",
   "IsSuccess": true,
   "TotalRecordsCount": 0,
   "DocumentName": null,
   "Data": [
     {
        "DocumentType": null,
        "DocumentTypeID": null,

Document Verification API's Specification

Description:

Request Parameters:

Parameter Name	Data Type	Description
User Id	String	This parameter indicates the User id and It will be a string type
DocumentTypeId	int	This parameter indicates the Document type id and it will be a int type

Successfully Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the message of data retrieved and it will be a string type
IsSuccess	String	This parameter checks the data and if it is successful response than it will be true
TotalRecordsCount	String	This parameter indicates the total record count and it will be a string type
DocumentName	String	This parameter shows the document name and it will be a string type
Data	String	This parameter indicates the null data and it will be an string type

Failure Response:

Parameter Name	Data Type	Description
Message	String	This parameter indicates the error and it will be a string type
IsSuccess	String	This parameter checks the data and if it is unsuccessful response than it will be false
TotalRecordsCount	String	This parameter indicates the total records count, if total records count will be wrong.
DocumentName	String	This parameter indicates the document name and it will be an string type.
Data	String	This parameter indicates the null data and it will be an string type

1.1. Get document detail by rule:

Private URL:
http://103.203.136.80/DocumentVerificationEngineWebAPI/MobileApi/GetDocumentDetailByRule

Request Parameters:
UserID : Enter your user id
RuleMapperId : Enter your rule mapper id

Response json:
Successful Response:
```
{
  "Message": "Data Retrieved",
